Place: FIEP CONVENTION CENTER

Avenida Comendador Franco, 1341 - Jardim Botânico

Curitiba, PR - 80215090

Brazil

The Hackathon TI Safe (<https://class.tisafe.com/hackathon/>)" that will take place in Curitiba between May 7th - 9th , in the weekend before the Latin American SCADA Security Conference (CLASS 2021), will have an even broader challenge: How to protect smart cities?

The goal is to conduct a marathon of ideas to solve the challenges proposed by TI Safe. There will be three days of competition with 50 participants, divided into 10 teams.

One of the main objectives of the challenge is to develop new ideas, paths and solutions in the area of cybersecurity that will be incorporated into the Curitiba 2035 project, an initiative of the local city society to build long-term guidelines, which will guide the city's development policies in the next 20 years. The project aims to position Curitiba, in a 20-year horizon, at the level of the world's main innovative cities. This prospective study was based on an organized process of collective reflection of various segments of society, resulting in the prioritization of themes and proposition of actions appropriated to the desire for local transformation.

Theme:

The central theme of the HACKATHON TI SAFE edition will be "Cybernetic security solutions for smart cities' critical processes"

Participation:

Participation is open to students of technical courses, undergraduate courses in general, graduate studies of Curitiba and Region and liberal professionals. The team should be composed of a total of 5 (five) members.

Each team must contain at least one member with the following profiles:

- A web or mobile programmer;
- A member of the business area (administration, accounting, foreign trade);
- A member of the area of communication, social sciences, marketing, advertising, advertising, design;
- An industry representative (entrepreneur of any segment);
- A professional from industry, private sector or public sector.

Registration is free and individual.
